

Linear Actuators ML7420/ML7425

Linear Actuator, 600N, 0 (2) ...10 V Signal

Application

The ML7420/ML7425 actuators are designed for modulating control with controllers providing an analogue output of 0...10 V DC or 2...10 V DC. They operate Resideo's standard valves in heating, district heating, ventilation and air conditioning (HVAC) applications. Spring-return models provide a safety position at power failure.

Approvals

- CE

Special Features

- Easy and quick installation
- No separate linkage required
- No adjustments
- Low power consumption
- Force-limiting end switches
- Spring-return models
- Manual operator for ML7420 variants
- Position feedback signal
- 0...10 V DC or 2...10 V DC signal input selectable
- Direct / reverse action selectable
- Stroke position on signal failure selectable
- Corrosion-resistant design
- Maintenance-free
- Actuator-valve combinations approved according to DIN 14597 available

ML7420

ML7425

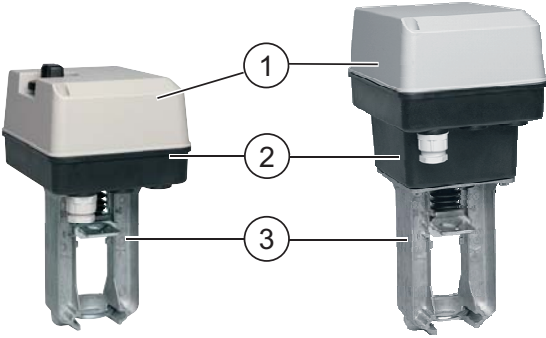

Technical Data

Temperature	
Operating temperature:	-10 ... +50 °C at 5...95 % rh
Max. medium temperature for Resideo linear valves*:	150 °C *
Max. medium temperature for Resideo Safety linear SV-valves:	130 °C
Weight	
Non-spring return type:	1.3 kg
Spring return type:	2.4 kg
Specifications	
Protection standard:	IP54 per EN60529
Protection class:	Class II per EN60730-1
Flame retardant housing:	UL 94-V0 (with metal cable gland – not supplied)
Operating mode:	Type 2B as per EN 60730-1
Wiring terminals:	1.5 mm ²
Stroke:	20 mm
Closing force:	≥ 600 N
Signals	
Input voltage:	y = 0...10 V DC or 2...10 V DC R _i = 100kΩ
Signal source:	1 kΩ max.
Position feedback signal:	x = 2...10 V DC
Load:	1 mA max.

* When equipped with the High-Temp. Kit (see section Accessories), all actuators are suitable for medium valve temperatures of up to 220 °C.

Construction

Overview	Components	Materials	
 <p>ML7420 ML7425</p>	1	Cover	ABS-FR
	2	Base	glass fiber reinforced plastic
	3	Yoke	aluminum diecast

Transportation and Storage

Keep parts in their original packaging and unpack them shortly before use.

The following parameters apply during transportation and storage:

Parameter	Value
Environment:	clean, dry and dust free
Min. ambient temperature:	-40 °C
Max. ambient temperature:	70 °C
Min. ambient relative humidity:	5 % *
Max. ambient relative humidity:	95 % *

*non condensing

Method of Operation

The drive of a synchronous motor is converted into linear motion of the actuator stem by using a spur gear transmission. The actuator stem is connected with the valve stem by a button keyed retainer connection.

An integrated spring package limits the stem force to a factory-adjusted value in either direction.

Installed micro switches switch off the actuator precisely when the specified stem force is reached.

Manual Operation

Actuators without spring return (ML7420) are equipped with a manual operator used in case of power failure. Manual operation is possible only after the power supply has been switched off or disconnected.

To operate, push the manual operator knob down and turn clockwise to move the stem downward and counter-clockwise to move the stem upward. If the actuator returns to automatic control, the manual operator knob unlocks automatically.

In the case of actuators with spring return, the manual operator is located under the cover.

Spring Return

The ML7425 spring return actuators provide a defined safety position of the valve in case of power failure.

The spring return actuators are shipped from the factory with a shipment stop (to lock the knob) in order to allow connection of the stem button retainer to the valve stem without power supply.

Override option

All actuators have an integrated override function.

When the override signal is applied, the actuator drives to the fully-open or fully-closed position, regardless of the controller signal.

Installation Guidelines

Electrical Installation

The actuators are delivered with a pre-installed cable gland M20x1.5 and two additional knock-outs for M16x1.5 and M20x1.5.

Max. cable length/diameter for field mounting:

- 200 m / 1.5 mm² (ML7420A6009) or
- 100 m / 1.5 mm² (ML7420A6017) or
- 50 m / 1.5 mm² (ML7425xxxx).

Note: To avoid malfunction, it is necessary to connect 24 V AC power and ground.

Wiring

0/2...10 V

Auxiliary switches

The actuators can be equipped on site with an auxiliary switch unit consisting of two switches. Their switching points are adjustable over the full length of the actuator stroke. The switches can be used to switch pumps or provide remote indication of any stroke position. A cable gland M20x1.5 is delivered with the unit.

Action

The direction of action can be reversed by pressing the left-hand push button (W3) located on the printed circuit board, if the corresponding LED is lit, this indicates that the actuator stem will retract at a control signal of 0(2) V DC (factory setting); if it is dark, the actuator stem will extend at a control signal of 0(2) V DC.

Input Signal Range

The range of the analogue input signal Y can be changed by pressing the right-hand push button (W2) located on the printed circuit board. If the corresponding LED is lit, this indicates that the actuator is set for 0...10 V operation (factory setting); if it is dark, the actuator is set for 2...10 V operation.

Input Signal Failure

Using the potentiometer (W1) located on the printed circuit board, the actuator can be adjusted such that in case the signal input fails (due, e.g., to a broken wire) or exceeds 12.5 V, the actuator will run to any pre-configured position between 0 % and 100 %. The factory setting is with the actuator stem in the central position (50 %).

Note: The two push buttons (W3 and W2) and the potentiometer (W1) are accessible after the cover has been removed and are located at the rear side of the protection sheet of the printed circuit board.

Output Signal "POSITION"

An analogue output signal 2...10 V DC "POSITION" is available which represents the actual actuator position. It can be used for remote indication.

When the actuator stem is extended, the output signal is 10 V DC.

Technical Characteristics

Operation mode

	ML7420A6009	ML7420A6017	ML7425A6008	ML7425B6007
Voltage	24 V AC $\pm 15\%$, 50/60 Hz			
Signal input 10 V DC *	Stem extended 2-way valve: "closed" 3-way valve port A-AB: "open"			
Signal input 0(2) V DC *	Stem retracted 2-way valve: "open" 3-way valve port A-AB: "closed"			

* Factory setting; can be reversed by pressing the push button (W3) located on the PCB
