### Overview

#### A companion for the UDC1200/1700

Based on the same technology as the UDC1200/1700 low price controllers, the UDI1700 is the ideal companion of those controllers for application requiring performance in control and accurate indication.

#### Moisture resistant front face

Meets NEMA 3/IP65 front face protection against dust and water.

#### Universal Power supply and input

Can operate on any line voltage from 90Vac to 264Vac at 50/60Hz. A low voltage 24/48Vac/dc solution is also available. All input types like thermocouples, RTDs and linear DC are configurable as standard.

#### Flexibility & commonality

The option boards (alarm relay output, dual alarm relay and linear output retransmission ) are plug-in and autodetected for easy upgrade and low inventory. Furthermore, the unit has no jumpers !

#### Large visibility

A large 14 mm four digits LED display in red make the UDI1700 easy to read from a distance. A specific digit for °C or °F is provided.

#### Alarm strategy

Up to five soft alarms are available with or without remote relay action. The alarm types can be set on PV high or low . Alarm 1 can be latched and requires acknowledgment from the operator.

#### Min. and Max. indication

Maximum and Minimum values attained by the process variable since the last reset are stored for further analysis.

#### Time elapsed

The UDI1500 can also store the time elapsed since the alarm 1 became active. In combination with the above Max. and Min. features, it provides alarm information for more detailed analysis.

#### Transmitter Power Supply

Provided as an option on output 3 is 24 Volts DC power for a 2- wire transmitter.

#### Configuration

Easy and full configuration with straightforward menu via the instrument front face.

#### PV retransmission

The linear optional output 2 can be used for PV retransmission.
